

•About Us

The SMA Clinical Research Center is part of the Pediatric Neuromuscular Disease Program at our institution. The SMA Clinical Research Center offers expertise, education, resources, and guidance to families affected by SMA.

Fundraising is in progress to support the activities of a newly established clinic dedicated to the care and medical management of children living with SMA, a disease that causes the degeneration of motor neurons in the spinal cord.

Our mission is to provide comprehensive patient care, support research into the cause and cure for spinal muscular atrophy, educate tomorrow's health care professionals, and reach out to the community we serve.
